state space models play a key role in the estimation of time varying sensitivities in financial markets the objective of this book is to analyze the relative merits of modern time series techniques such as markov regime switching and the kalman filter to model structural changes in the context of widely used concepts in finance the presented material will be useful for financial economists and practitioners who are interested in taking time variation in the relationship between financial assets and key economic factors explicitly into account the empirical part illustrates the application of the various methods under consideration as a distinctive feature it includes a comprehensive analysis of the ability of time varying coefficient models to estimate and predict the conditional nature of systematic risks for european industry portfolios

this paper presents a theoretical and empirical analysis of policies aimed at setting a more depreciated level of the real exchange rate an intertemporal optimizing model suggests that in the absence of changes in fiscal policy a more depreciated level of the real exchange can only be attained temporarily this can be achieved by means of higher inflation and or higher real interest rates depending on the degree of capital mobility evidence for brazil chile and colombia supports the model s prediction that undervalued real exchange rates are associated with higher inflation

while the tobacco industry is among the most substantial and successful economic enterprises tobacco consumption kills more people than any other product economic analysis of tobacco product markets particularly for cigarettes has contributed considerable insight to debates about the industry s importance and appropriate public policy roles in grappling with health consequences of tobacco the most significant example is the rapidly expanding and increasingly sophisticated body of research on the effects of price increases on cigarette consumption because excise tax is a component of price the resultant literature has been prominent in legislative debates about taxation as a tool to discourage smoking and has contributed theory and empirical evidence to the growing interest in modeling demand for addictive products this chapter examines the research and several equity and efficiency concerns accompanying cigarette taxation debates it includes economic analysis of other tobacco control policies such as advertising restrictions prominent in tobacco control debates research addressing the validity of tobacco industry arguments that its contributions to employment tax revenues and trade balances are vital to economic health in states and nations is also considered as it is the industry s principal weapon in the battle against policy measures to reduce tobacco consumption

this paper proposes and analyzes a life cycle model of consumption by couples the model is considerably more complicated than the standard model for singles because it has to account for the welfare of a surviving spouse the determinants of consumption are the survival paths of each spouse bequeathable wealth the flow of annuities both before and after the death of one of the spouses a motive for bequeathing at the death of the surviving spouse and the parameters of the utility functions of the couple and of each spouse if widowed the analysis shows how consumption and the rate of change of bequeathable wealth react to variations in these determinants and it compares the consumption level of a single person to a couple summaries of wealth change and consumption in panel data are given which offer general support for the life cycle model

against a background of projections of sharply increasing elderly dependency rates workers in the major industrial economies are apprehensive that their social security benefit entitlements will be cut before or after they retire leaving them with inadequate retirement income this paper looks at recent benefit rule changes in the g7 countries to see what can be learned about such political risk in payg pension systems from this small sample i find that projections of rising costs under current rules are inducing reforms and that these reforms often have a major impact on the present discounted value of promised benefits for middle aged and younger workers usually however the benefits of the retired and those nearing retirement are protected the phasing in of benefit cuts raises the question as to why younger workers are willing to take significant cuts in their implicit wealth while protecting the currently old one possible answer is explored through a simple model these workers fear even larger cuts in their benefits if the tax burden on future workers rises too high
